DETAILED ACTION

Allowable Subject Matter

1. Newly added claims 31-59 have been renumbered as 32-60 (see Rules 1.126).

As a result of the renumbering, the canceled claims are now 52-55.

2. Claims 32-51, 56-60 renumbered as 1-25 are allowed. The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or make obvious :

- identifying characteristics of data files wherein a plurality of agents, at least one agent provided on one of a plurality of clients create file content IDs using a mathematical algorithm for sending to an ID appearance database provided on a server and wherein the server using a characteristic comparison routine identifies a characteristic of the file and transmits the characteristic to the client agent as recited in claim 32
- receiving via a network on a processing system files content identifiers for data files from a plurality of file content identifier generator agents wherein each agent provided on a source system creates file content IDs using a mathematical algorithm and wherein the processing system determines whether each content identifier matches a characteristic of other identifiers and outputs an indication of the characteristic of the data file to a source system upon request as recited in claim 40

Art Unit: 2171

- receiving on a second computer digital content identifiers created using a mathematical algorithm unique to a message from at least two first computers having digital content ID generator agents, comparing on the second computer the digital content identifier to a characteristic database of digital content identifiers received from said first computers to determine whether the message has a certain characteristic and responding to a query from a plurality of computers to identify the existence or absence of said characteristic in the message as recited in claim 47
- a file content classification system wherein a computed value of at least two non-continuous sections of a data file is generated by a client agent as file content identifier on a first computer and wherein a server comparison agent on a second computer coupled by a network to the first computer receives the identifiers and provides replies to the client agents as recited in claim 56
- collecting data to a server on a processing system from a plurality of systems having a client agent generating digital content identifiers created using a mathematical algorithm for each of a plurality of files on the Internet, characterizing the files on the server and transmitting an indication of the presence or absence of a characteristic in the file from the server to the client agent as recited in claim 57.

The closest prior art of record Cotton (US 6,330,590 B1) discloses a system and method for preventing delivery of unwanted bulk e-mail. However, in Cotton, filtering is performed at either the central server or the client location. In contrast, applicant's

invention generates file IDs at the clients using a mathematical algorithm then sends the generated IDs to a server where comparison is performed to identify characteristics of the files to transmit to the client.

Claims 33-39, 41-46, 48-51, 58-60 being further limiting and definite are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
